The invention provides primate monoclonal antibodies which specifically bind human CD23, the low affinity receptor for IgE (FceRii/CD23), and comprise either of a human gamma-1 or human gamma-3 constant region that binds to human Fc gamma receptors and inhibits IgE expression. The monoclonal antibodies of the invention are claimed to be useful for inhibiting induced IgE production for treating or preventing allergic, inflammatory and autoimmune conditions e.g. allergic rhinitis conjunctivitis, autoimmune haemolytic anaemia, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New anti-human CD23 monoclonal expression to treat or prevent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   misc_feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           24-SEP-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Barnett RS,
```

```
This is the nucleotide sequence of novel target plasmid Mandy.

The plasmid includes an inactivated murine dihydrofolate reductase

(DHER) gene, the Escherichia coil beta galactosidase gene,

baculovirus DNA, a cassette comprising the promoter and enhancer

elements from cytomegalovirus and SV40 virus, the E. coli

beta-glucuronidase (GUS) gene, firefly luciferase gene, an

inactivated Salmonella typhimurium histidinol dehydrogenase (HisD)

gene and transposon Tn5 neomycin phosphotransferase (neo) gene

sequences, in a pRR-derived backbone, and also an anti-human CD23

IgE receptor human gamma-1 monoclonal antibody 5EB gene. The

invention provides a novel method for integrating a desired

exoqueous DNA at a target site within the genome of a mammallan

cell with a 'marker plasmid' such as Desmond (see AAV61792), which

contains a unique sequence that is foreign to the mammalian cell

genome and which provides a substrate for homologous recombination,

followed by transfection with a 'target plasmid', such as Mandy

con Molly (see AAV61793), containing a sequence which provides for

homologous recombination with the unique sequences contained in

the marker plasmid, and further comprising a desired DNA that is

con municulated those the mammalian cells, typically an

immunoglobulin or other secreted mammalian and system utilises the neo gene as a

dominant selectable marker. The neo gene is split into 3 the mammalian cells.

Exon 3 is present on the marker plasmid

into the mammalian cells. Exons I and 2 are present on the

conteins and and and are and and are and a present on the

conteins the mammalian cells. Exons I and 2 are present on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      turgeting plasmid, and are separated by an intron into which at least one gene of interest is cloned. Homologous recombination of the targeting vector with the integrated marking vector results in correct splicing of all 3 exons of the neo gene and expression of a functional neo protein. The method is applicable to all mammalian cells, and can be used to express any type of recombinant protein. The use of a triply spliced selectable marker means that all selected colonies arise from homologous recombination. In addition, the number of colonies that need to be screened to identify high producer clones is reduced. An amplifiable gene can be inserted on integration of the marking vector, so that when a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene is targeted to this site, the gene is further enhanced by gene amplification.

The antibodies can bind to human Tumour Growth Factor-beta (TGF-beta) II receptor, resulting in the inhibition of the signal transduction of human TGF-beta into cells. The antibodies can be used for the prevention and treatment of diseases associated with the production of TGF-beta, such as tissue fibrosis in the lung, liver, skin, kidney or other tissues, atherosclerosis, atopy, keloid and arthritis. The present sequence was

The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to

proteins or their active domains. The polypeptides, polynucleotides and proteins or their active domains. The polypeptides, polynucleotides and antibodies railsed against the polypeptides are used in a method of cantibodies railsed against the polypeptides are used in a method by the aberrant protein expression or activity. The polypeptides can be used as complexely are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and production of recombinant proteins, and in antibody anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, independent and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a

The antibodies comprise chimeric L and/or H chains, where the C region is of human and L region of mouse, origin. The present sequence encodes a specifically claimed region of an antibody of the invention. Host cells, transformed with vectors containing DNA encoding antibodies of the invention, can be used to produce the antibodies. The antibodies may be used to treat hypercalcaemia, especially that due to a malignancy, e.g. cancers of pancreas, lung, throat, larynx, tongue, qum, ososphagus; stomach, liver, breast, kidney, bladder, womb or prostate or malignant lymphoma. They may also be used for treatment of hypophosphaemia such as that due to

                                                                                                                                                                                                     5
                 cachexia containing a substance which inhibits the binding of a parathyroid hormone related peptide (PTHFP) to its receptor, as an active component. This substance may be an antagonist to the receptor, or an antibody (preferably monoclonal) or antibody fragment, recognising PTHFP. The antibody is preferably humanised or chimeric. The present invention also describes a humanised antibody prepared by hybridoma 2.57-137-1 (FERM BP-561). The composition is used for the treatment of cachexia arising in connection with diseases such as cancer, thereby improving the quality of life of the patient. The present sequence encodes a human antibody heavy chain from the present

```
A composition for the treatment of hypercalcemic crisis contains as active component a substance which inhibits the binding of parathyroid hormone related peptide (PTHIP) to its receptor. The inhibitor is used for the treatment of hypercalcemic crisis, such as that associated with
                                                                                                                                                                                                                                               The invention relates to a method of treatment of hypercalcemic crisis.
                                                                                                                 Treatment of hypercalcemic crisis with a substance inhibiting binding of parathyroid hormone related peptide to its receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

                                                                                                                                                                                                                                                                                                                                                                                      The specification describes a tissue decomposition inhibitor, which comprises a substance that inhibits peptides associated with parathyroid hormone (PTH) from binding with their receptor. The method is used to inhibit tissue decomposition caused by cancer cachexia, septicemia, heavy external injury or muscular dystrophy, and for treating patients with elevated cytokine (Interleukin-6, Granulocyte Colony stimulating factor, Interleukin-11 and Leukemia inhibitory factor) levels. It may also be used for preventing weight loss caused by cancer cachexia. The present sequence encodes a protein, which is

                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a stabilised composition of an antibody which recognises parathyroid hormone-related peptide (PTHLP) - see AAG64793. The composition consists of a solution of the antibody in a buffer of pH 5-8 containing one or more of acetic acid, phosphoric acid, citric acid and their salts. The composition has increased storage stability, especially at elevated temperatures. The composition antagonises the action of PTHLP, and may be used in the treatment of diseases involving disturbances of calcium regulation (high or low serum calcium concentration) such as humoral hypercalcaemia of malignancy and as an analgesic. The present sequence represents DNA encoding a humanised
                                                                                                                                                                                                                           Parathyroid hormone-related peptide; PTHrP; antagonist; antibody; calcium regulation disorder; serum calcium concentration; heavy chain; humoral hypercalcaemia of malignancy; cytostatic; analgesic; humanised;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Composition for treating diseases of calcium regulation and for use as an analgesic, comprises an antibody recognizing parathyroid hormone

                                                  The present invention describes an agent (I) for ameliorating low vasopressin levels, and symptoms caused by this depression, containing as an active component a substance which inhibits the binding of parathyroid hormone related peptide (PTHrP) to its receptor. (I) has antidiarrheic, antiemetic, antidiabetic and antipyretic activities. (I) can be used for the amelioration of symptoms caused by decrease in vasopressin levels, such as that due to cancer are treated using the agent. These symptoms include dehydration, excessive urination, thirst, vomiting, diarrhoea, fever, perspiration and diabetes. AAF69085 to AAF69140 and AAB76879 to AAB76877 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300

The present line into incention again, again (1) to the Leadumin and prevention of diseases other than hyperclacemia associated with parathyroid hormone (PTH) or parathyroid hormone related peptide (PTHPP).

(I) contains as an active component a substance which promotes or inhibits the binding of ligands to PTH receptor or PTHPP receptor or is an agonist or antagonist to these receptors. (I) have analgesic, or is an agonist or antagonist to these receptors. (I) have analgesic, immunosuppressive, mootropic, neuroprotective, antiinfammatory, cycostatic, antithyroid, eating-disorders and cardiovascular activities.

(I) is used for treatment and prevention of disorders associated with PTH or PTHPP, including: pain; immune suppression, disturbances of the diseast, blood chemistry, thyroid function, and electrolyte balance; central nervous system disorders such as sleep disturbance, meurological disturbance, brain function disturbance; brain function disturbance; and disorders caused by PTH or PTHPP associated cytokine cascade including blood poisoning, dropsy, inflammation, blood disease, calcium disturbance and autoimmune disease.

Creatment and prevention of disorders other than hypercalcaemia which are associated with PTH or PTHPP especially those associated with malignant tumours, and thereby ameliorating the quality of life of these patients. AAR69141 to AAR69198 to AAR8691 to Expresent
                                                                                                                                                                                                                                                                                                      or parathyroid hormone related peptide receptor for treatment of disorders associated with parathyroid hormone other than hypercalcemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

Agents inhibiting binding of parathyroid hormone related peptide to its receptor for treatment of drug-resistant hyperglycemia \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an agent (I) for the treatment of drug-resistant hyperglycaemia. (I) contains as an active component a substance which inhibits the binding of parathyroid hormone related peptide (PTHRP) to its receptor. (I) is a calcium-antagonist. (I) can be used for treatment of drug-resistant hyperglycaemia e.g. associated with cancer. The hyperglycaemia is resistant to treatment with other drugs including bone resorption inhibitors (such as bisphosphonate or calcitonin), calcium elimination promoters and intestinal calcium absorption inhibitors. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein levels, as tissue markers, and to isolate receptors or ligands

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 54, 1
